PROJECTS

Minnesota Recreation Website (11/2018 – Present) [🔗](#)

- Project composes of the following seed prototype projects below.
- Continuously being develop along with two prototypes made to show idea behind the whole project and gather feedback from end users.
- Mostly static pages for SEO purposes and with a single page eCommerce application for fast product browsing and checkout and single page admin panel for product CRUD operations.
- Demo Link: www.minnesotarec.surge.sh

eCommerce Website Prototype [🔗](#)

- Front End is built with React, React-Router, Redux state management, and a Bootstrap 3 HTML template from ThemeForest.
- RESTful API is built with Node/Express and MongoDB/Mongoose.
- Axios library is used to help with fetching resources and Web LocalStorage API is used to build the guest car functionality.
- Demo Link: www.jrk-shop.surge.sh/

Product Management Web Application Prototype [🔗](#)

- Front End is built using React, React-Router, Redux State Management, and Material UI React Component library.
- RESTful API is built with Node/Express and MongoDB/Mongoose.
- Used Material UI React Component library for the sake of learning the popular library, and the concept behind CSS-in-JS.
- Applied Agile methodology learned from Atlassian, creator of Jira, and using a Jira alternative, Pivotal Tracker, to manage the project.
- Demo Link: www.shop-admin.surge.sh

New Life in Christ Church Fellowship Website (2015 – Present) [🔗](#)

- First web development project to apply my knowledge after learning the fundamentals of HTML, CSS, and JS, reusable CSS, responsive web design, User Experience, and SEO.
- Used Bourbon Framework's Grid System, jQuery for most of the UI, and Harp JS to automate the building process.
- Learned the importance of understanding who is the target audience in making an effective websites or applications.
- Demo Link: www.newLifeInChristFellowship.com

Bootstrap 4 HTML template [🔗](#)

- Project built to get proficient with Bootstrap 4 framework and how to design an effective homepage or landing page of a website.
- The template is responsive and can be use as a template for a business or portfolio website.
- Demo Link: www.codepen.io/jrkcode/full/LOGpzE
